Add the following claims:

Claims 1-26 cancelled.

27. (New) Pressure-applied lid (30), for beverages (28) in cans (10) made from a cylindrical body (11) with a truncated cone-shaped top (12) closed by a head (15) in which an opening is created by a tear-off tongue, having a truncated cone-shaped body (33) and cylindrical mouth (32) internal shape and dimensions substantially corresponding respectively to the external shape and dimensions of the truncated cone-shaped top (12) and of the cylindrical body (11) of the can (10), comprising substantially at the beginning and end of its truncated cone-shaped body (33) two annular internal sealing ribs (48, 49), which ribs (48, 49) respectively match substantially at the beginning and at the end of the truncated cone-shaped top (12) of the cylindrical body (11) of the can (10).

28. (New) Lid (30) as in claim 27,

comprising a handle (40) having in it two notches (43) at the same height on each of the two slides, the distance between the bottoms of the notches being slightly greater than the width of the opening to be made by pulling on the head (15) of the can (10) so that, when the beverage (28) has been consumed, by slightly pressing said handle (40) into said aperture, the can (10) and the lid (30) are held together so preventing dispersal of the lid (30) in the environment and consequent pollution.
